

**We want to do with SKSchema following:**

- (1) At 01:30 AM make phone off and close Messaging application if open**
  - (2) At 06:00 AM make phone on**
  - (3) At 07:00 AM play custom sound file for wakeup**
- 

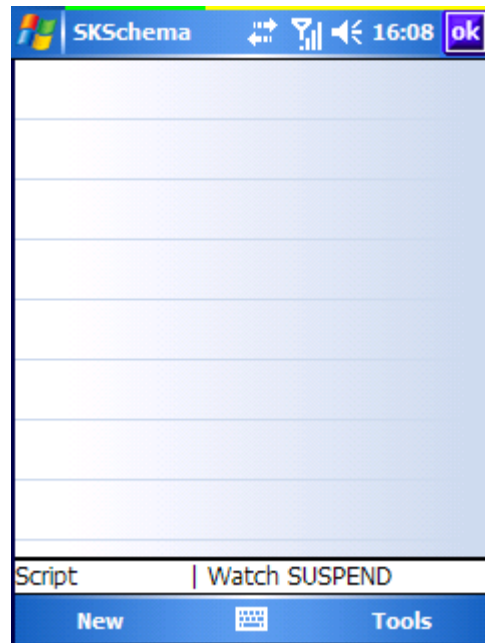

**Run SKScheMa**

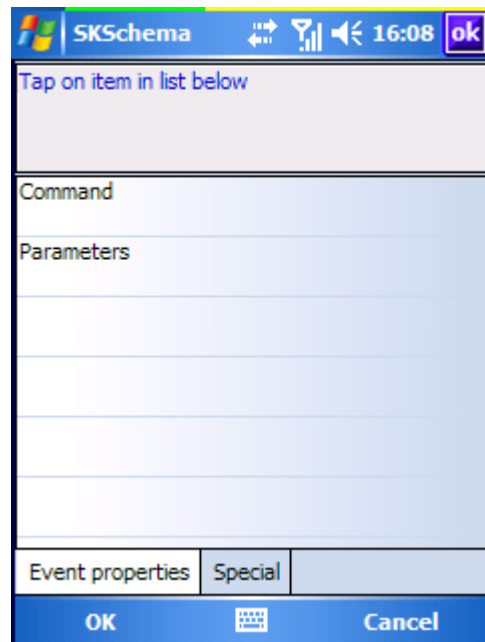

**You want do two operations at 02:00 AM, so we need make a script.  
Tap Tools->Script**

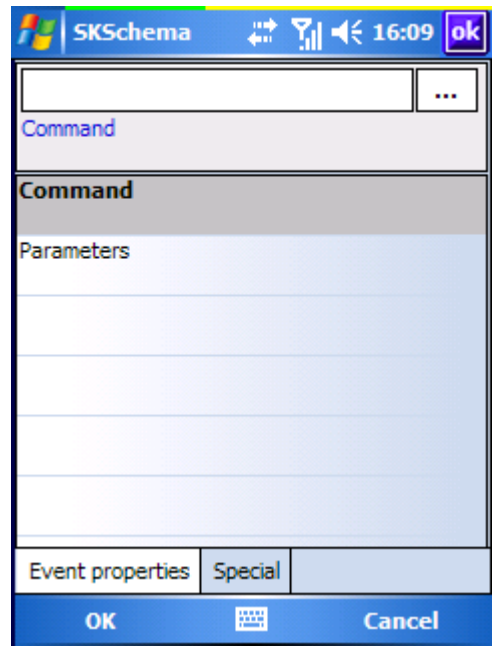

In script window tap New

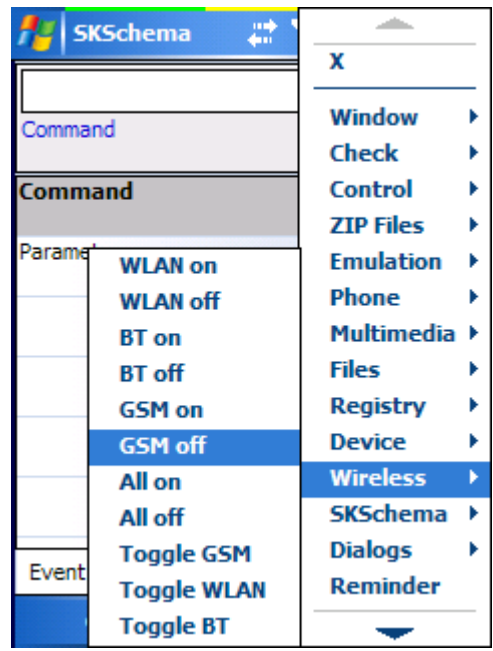

This is the script item properties window.

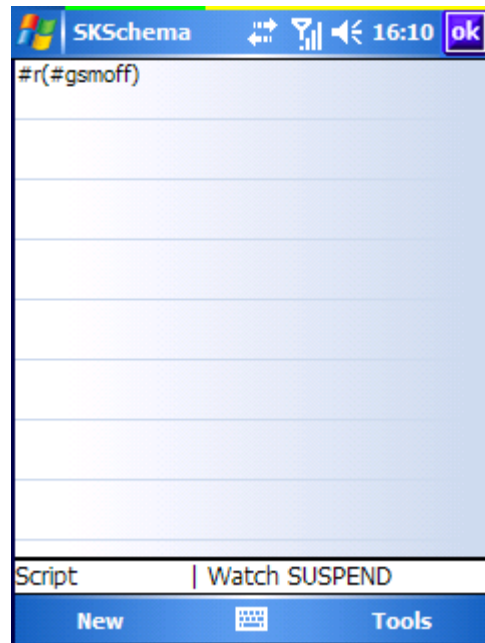

Select «Command» item, tap [...] button

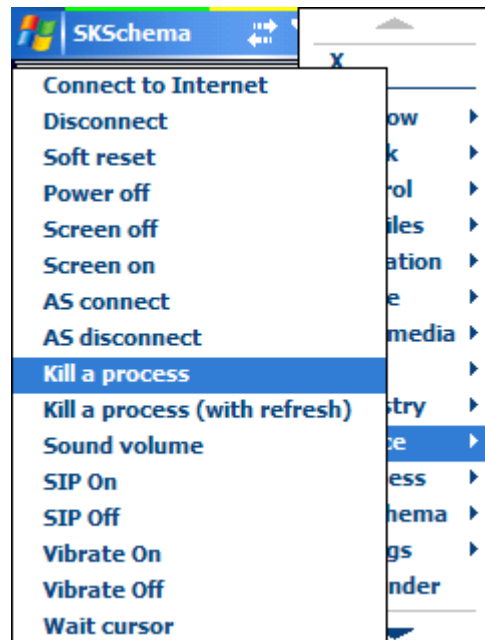

Select Wireless->GSM off,  
Tap OK

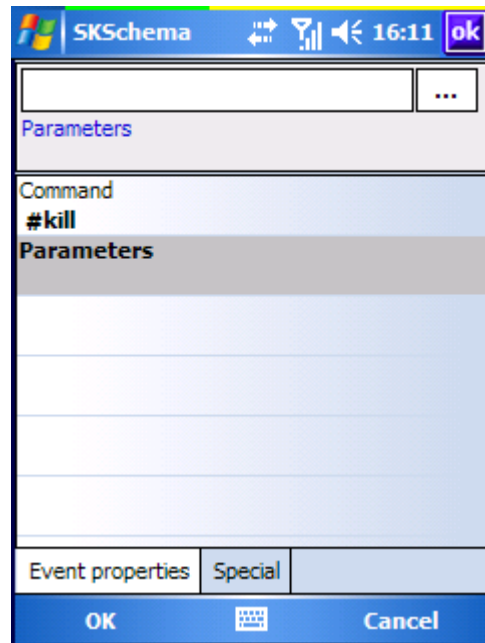

**You have first the script line.  
Tap New to add next line.**

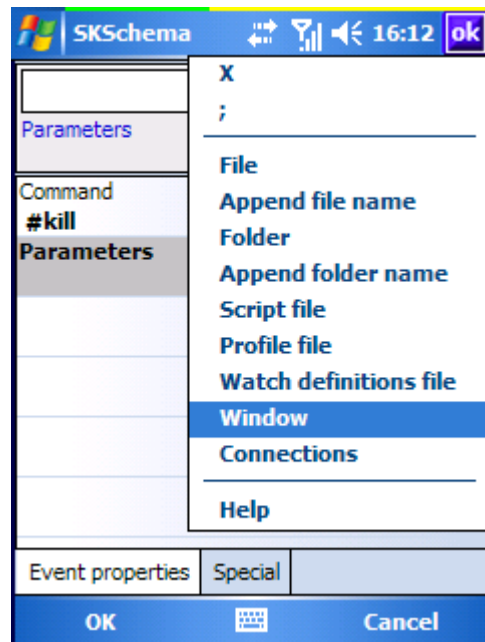

**Tap Command->[...]->Device->Kill a process.**

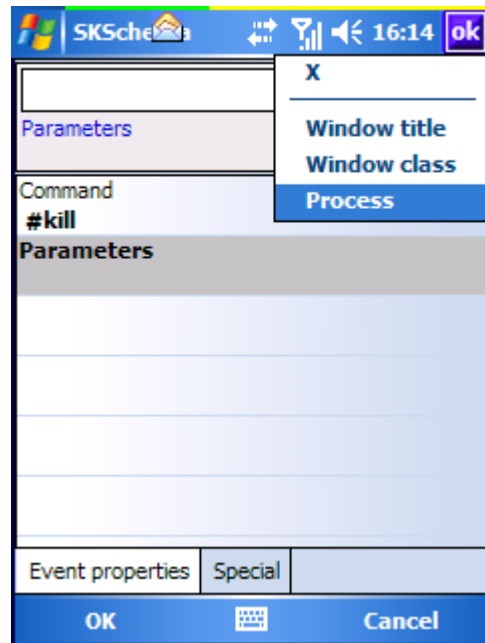

Select Parameters. You can enter process name from keyboard or select it from menu (if process exist now),

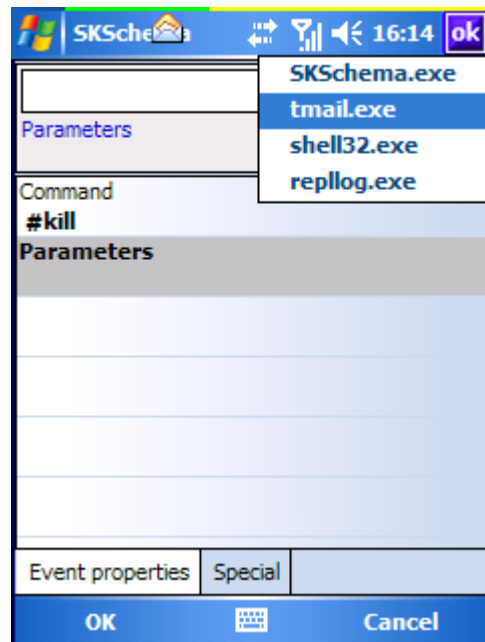

Tap [...] -> Window

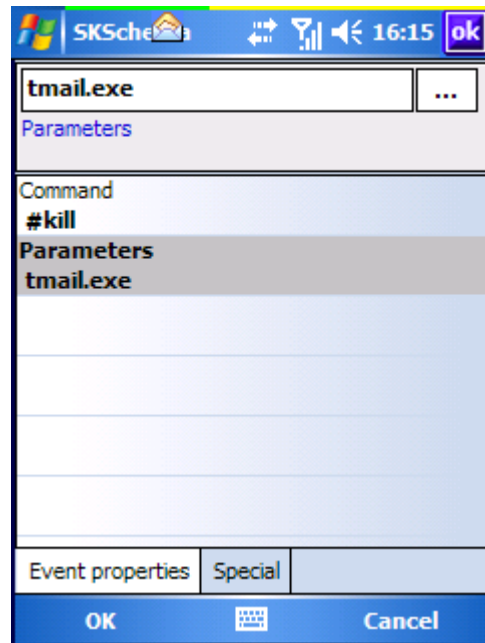

## Tap Process

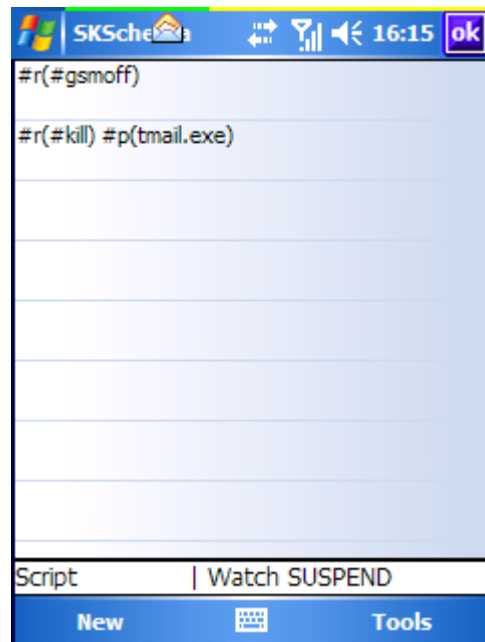

Select tmail.exe (this is the executable file name for Messaging)

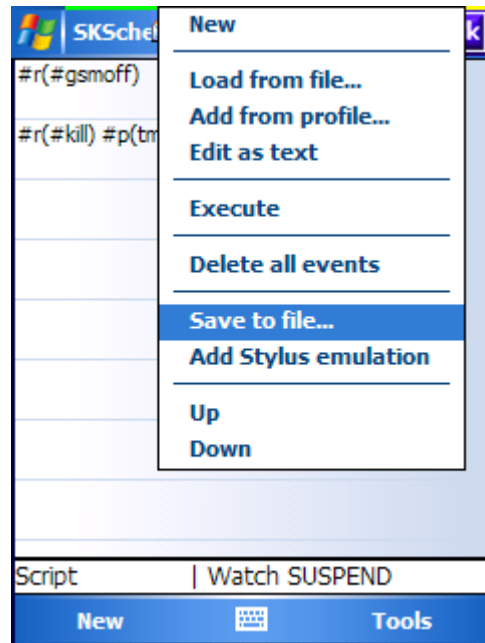

Tap OK

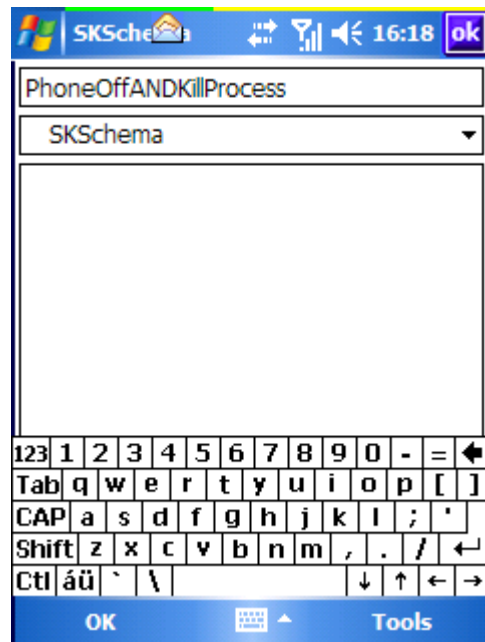

Now you have the script.

Now call context menu (tap-and-hold) and select «Save to file...»

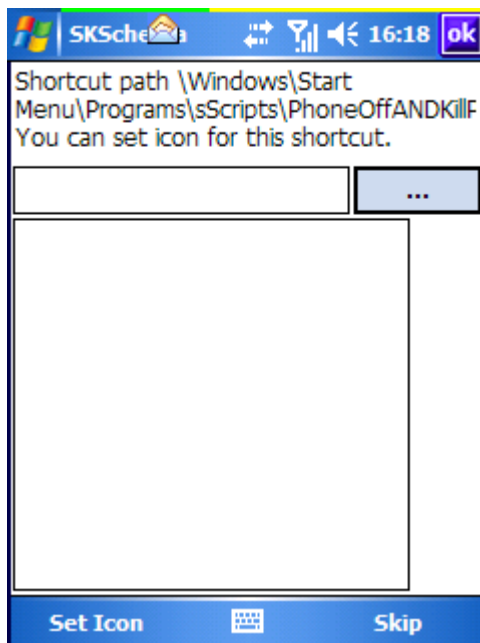

Select folder and enter the script name. Tap OK.

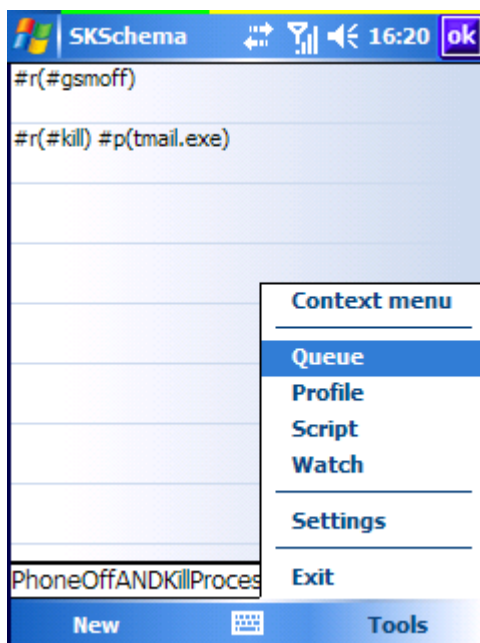

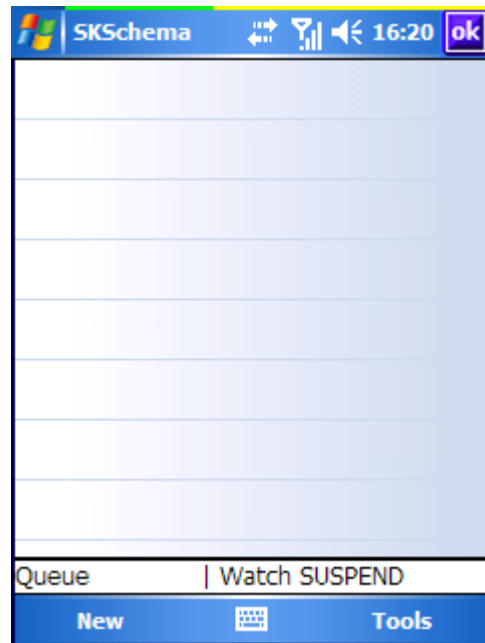

**If you want – you can select custom icon for your script. Otherwise – tap «Skip».**

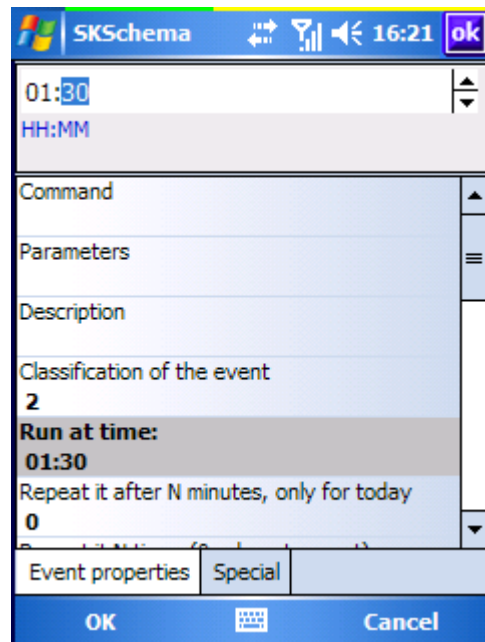

**Now you need the schedule script execution. Goto Queue window.**

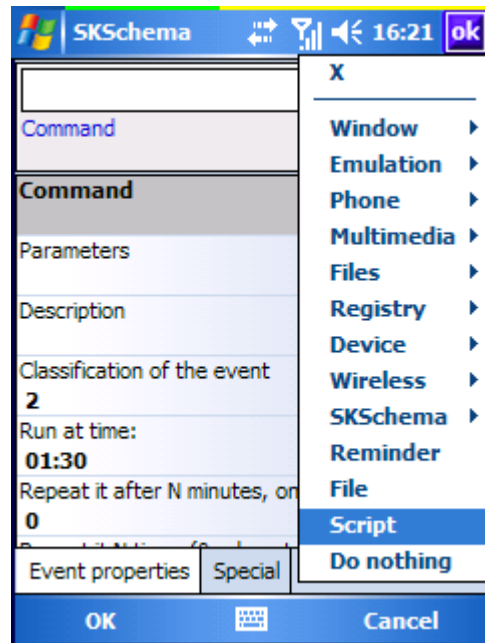

Tap «New»

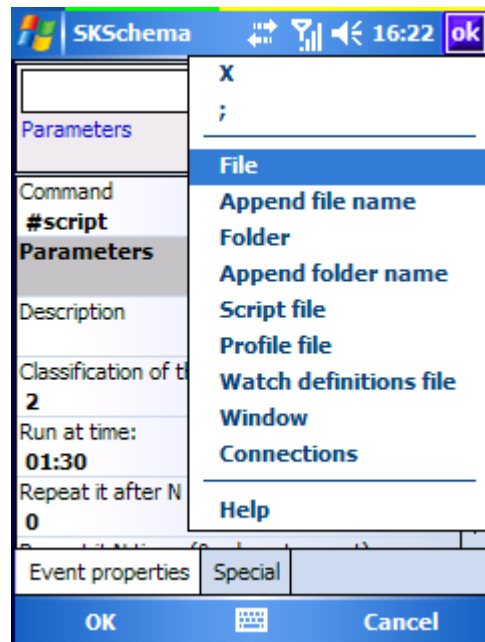

Enter event time.

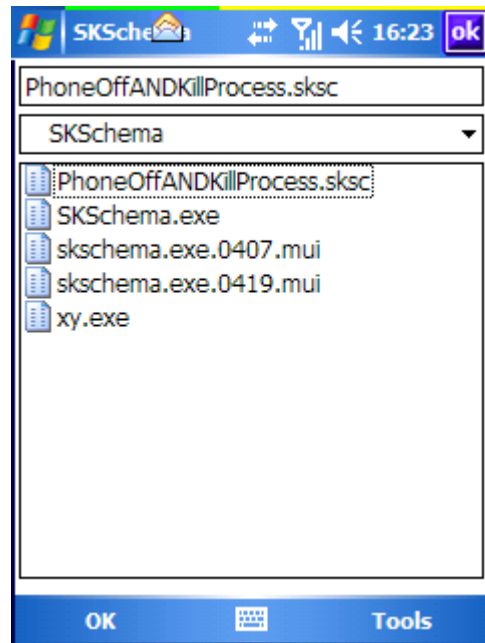

Tap Command->[...]->Script.

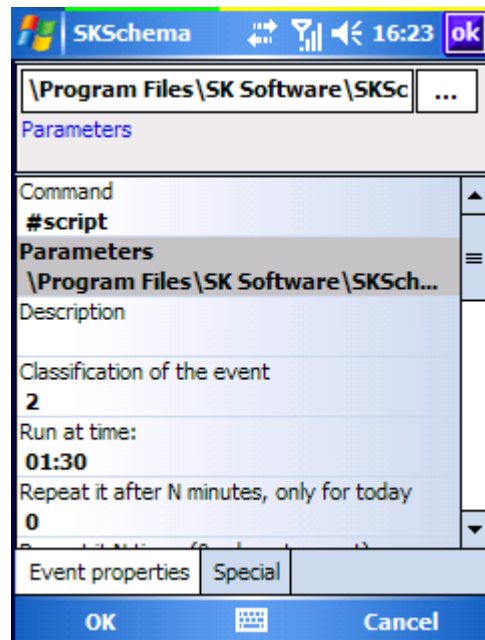

Select «Parameters».  
Tap [...]>File

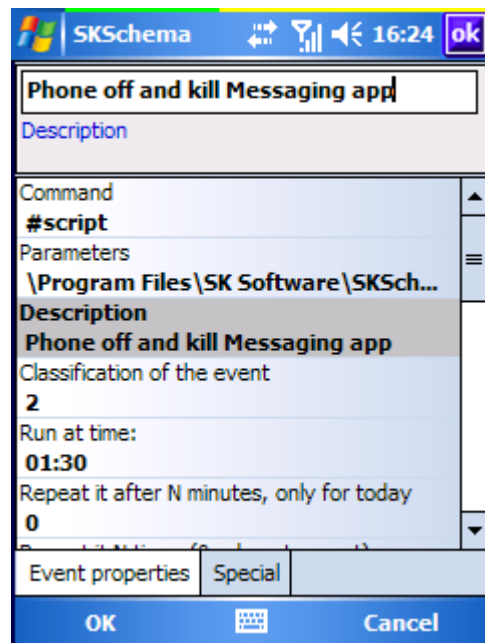

Select your script file. Tap OK.

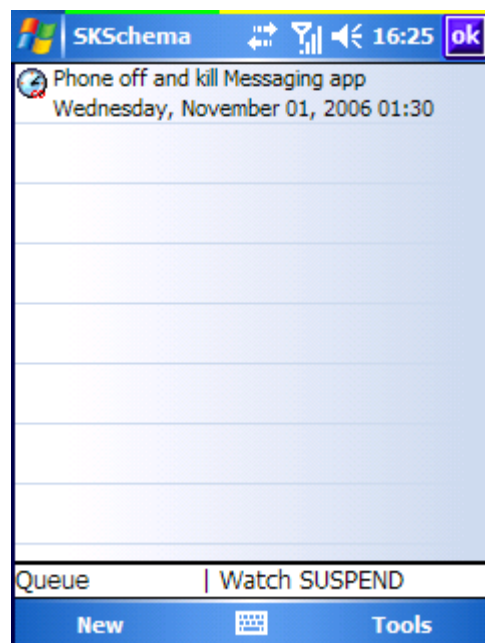

Select «Description»

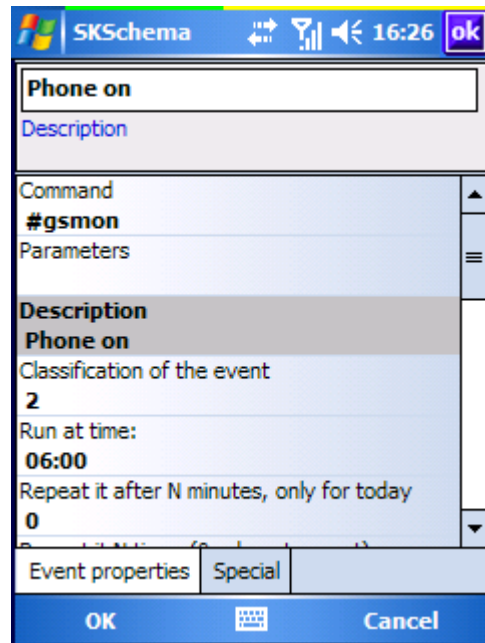

Enter description text.

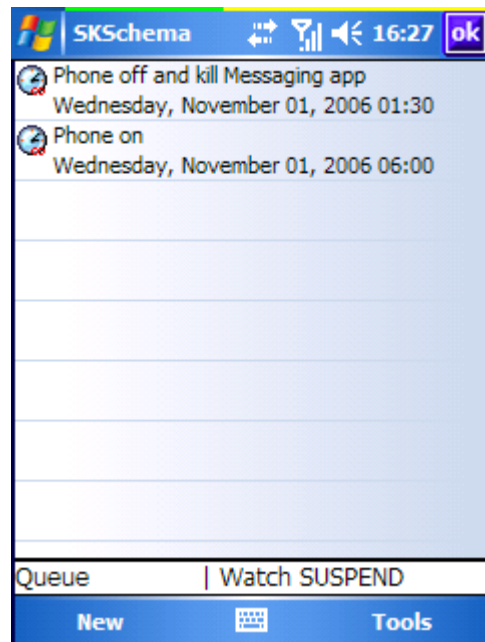

Tap OK.  
Now You have first event (1).

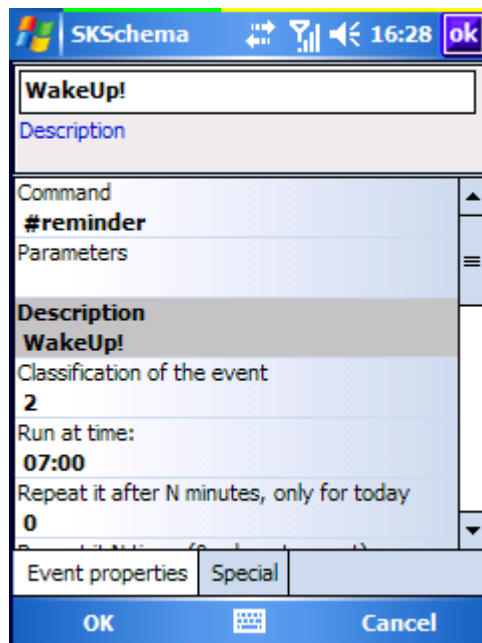

For next event You want do one operation – turn Phone on. Not need make script. Tap new and setup event parameters. Tap OK.

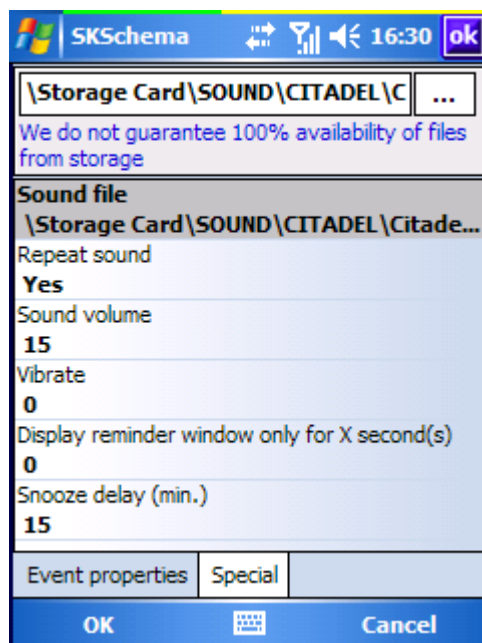

You have event (1) and event (2). Tap «New» for make event (3).

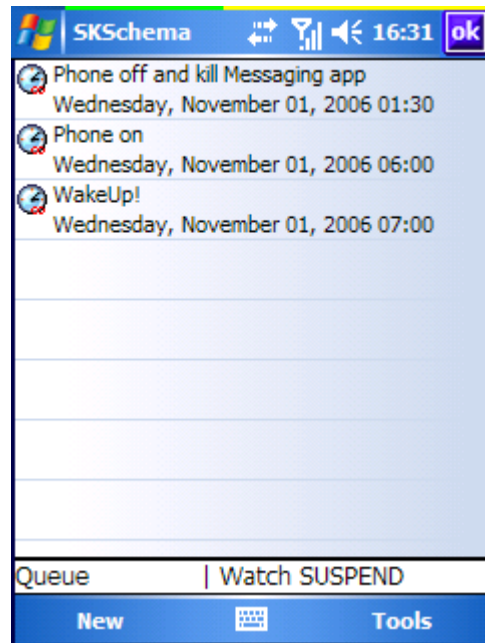

Enter «Command» - #Reminder (also you can select it from [...] menu).  
Setup time and enter description text.  
Tap «Special» tab.

Select your sound file (Sound file->[...]),  
Select repeat settings (yes/no), change the  
sound volume and snooze delay if you want.  
Tap OK.

**Now You make all events.**
